# WEATHER OF CONCERN

## Weather of Concern

- A Red Flag Warning is in effect until 08/31/16 at 2000 hours for portions of Lassen County.

## **Active Weather Warnings, Watches and Advisories by County:**

[http://www.wrh.noaa.gov/sto/brief/wwa\\_bc\\_cal.php](http://www.wrh.noaa.gov/sto/brief/wwa_bc_cal.php)

# WEATHER SYNOPSIS BY REGION

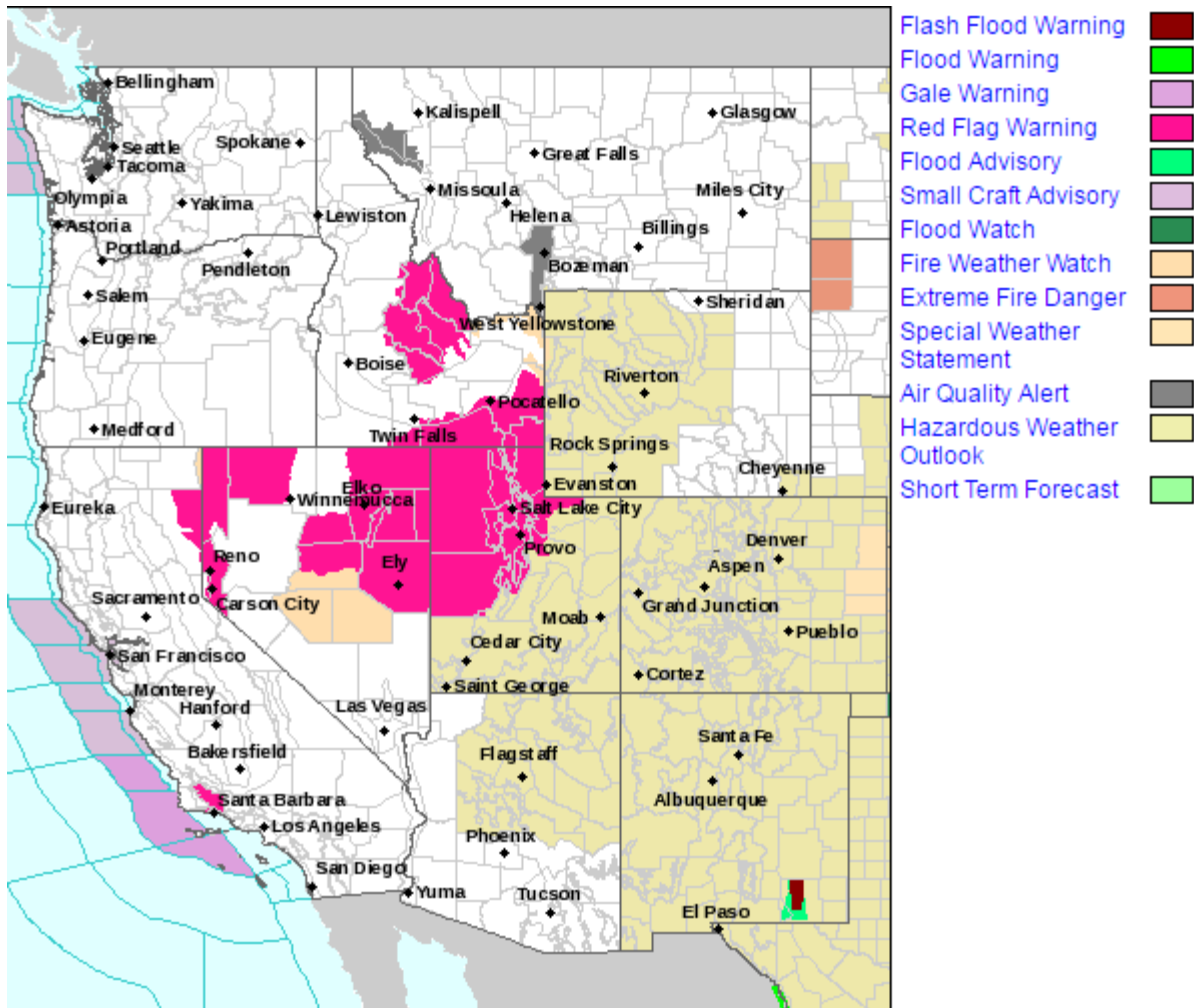

## **NORTHERN CALIFORNIA**

A low pressure trough will be over the western portion of the region until 09/02/16, then shift to eastern areas over the weekend. Mild and breezy weather will prevail. Areas east of the Cascade-Sierra crest will see south to southwest winds gust to 30-35 mph with relative humidity (RH) dropping to 8-18% this afternoon and 09/01/16 afternoon. These winds fall just below High Risk criteria. The same winds can be expected in exposed areas west of the crest, but with humidity in the 12-24% range. Coastal areas will benefit from a 2000+ ft marine layer that moves well inland each evening. Temperatures throughout the week will be 2-5 degrees below normal. Northern areas will be partly cloudy, with a slight chance of an isolated shower near the Oregon state line almost any day through early next week. The remainder of the region will remain mostly clear. On 09/02/16 once the trough will shift to our eastern areas winds will turn west to north. This will cause humidity to drop by about 10% on the west side of the crest, with the exception areas along the immediate coast. Temperatures, clouds, and wind speeds will remain about the same. At this time the northwest to north winds that will result in and around the Sacramento Valley are expected to remain below High Risk criteria. Temperatures will warm back up to normal or slightly above normal and winds will diminish early next week as the trough moves off to the east.

## **SOUTHERN CALIFORNIA**

A tight northerly pressure gradient is resulting in locally gusty Sundowner winds in Santa Barbara County early this morning. Last night, wind gusts to 50 mph occurred near Refugio. While winds have weakened during the past couple of hours, some gusts to 30 mph will be possible in this area through 0900. Otherwise, today will be the transition day as the ridge over the southern part of the state is replaced by an unseasonably deep trough which is set to arrive late this week. Temperatures will still be well above normal today with temperatures in the 80s in the mountains to around 100 in the valleys and lower foothills. Much cooler weather is expected the rest of the week and temperatures should lower 5-8 degrees each day. By the weekend, highs will be a few degrees below normal with afternoon readings only in the 80s in the valleys. Marine layer coverage and depth will increase through Saturday when night and morning low clouds will likely reach the lower coastal slopes. It will turn windy across inland areas during the afternoon hours, particularly Friday. Expect west winds of 20-30 mph with gusts to 45 mph in and near the Kern County Mountains, Antelope Valley, Banning Pass and eastern Cleveland National Forest. Low relative humidity (RH) in the 8-12% will be possible on the north and east sides of the San Bernardino and Cleveland National Forest 09/02/16 and 09/03/16. While lower elevations will be swathed in the marine layer, elevations above 4,000 feet in Southern California may see afternoon RH in the teens each afternoon. The relatively cool weather will last through the weekend before warmer weather returns early next week. Temperatures should return to near to slightly above normal readings by 09/05/16 and 09/06/15. No storms are expected through the period.
